

SECUREMAX-12 **ENGINEERED TAGLINES**

CONTROL THE LOAD WITH SECUREMAX-12 TAGLINES

INCREASED GRIP

SecureMax-12 is a twelve strand single braid rope made from polyester. It is designed to be flexible but firm and nubby for increased grip while in use.

HIGH-VISIBILITY

Manufactured from white polyester fiber with high-vis yellow tracers. SecureMax-12 is extremely easy for riggers to see and hold in order to maintain control of the load.

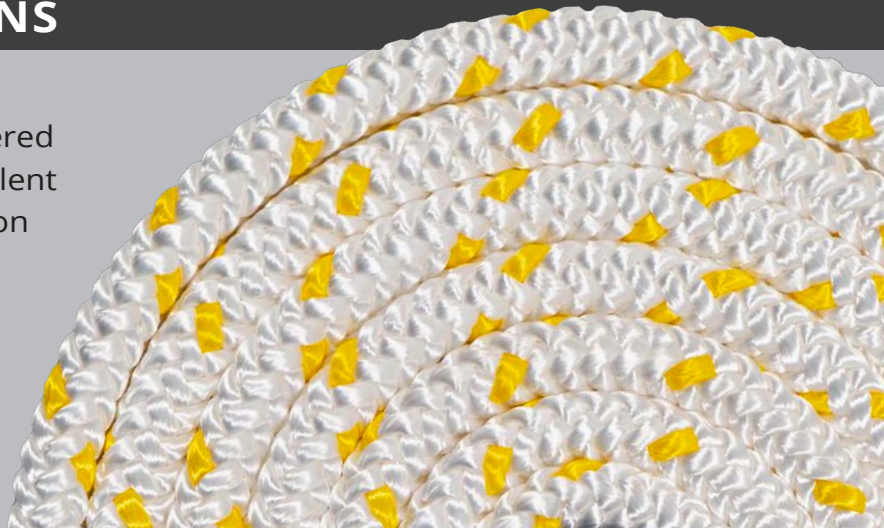

INSPECTABLE FEATURES

The high-vis yellow tracers can be used by Safety Managers to identify UV degradation damage to the rope as they fade. This helps to identify rope that should be removed from service in accordance with ASME B30.30.

WE PROVIDE HIGH QUALITY OVERHEAD LIFTING SOLUTIONS

SecureMax-12 is a twelve strand textured hollow braid rope that is commercial grade and engineered to be exceptionally strong, lightweight with excellent abrasion resistance for work in tough construction environments.

Jobsite Safety Managers should be deliberate in choosing an engineered tagline for every lift.

CONTROL THE LOAD WITH SECUREMAX-12 TAGLINES
